

# Energy Performance Certificate

Northern Ireland

**Apartment 4**  
**16a Killinchy Street**  
**Comber**  
**NEWTOWNARDS**  
**BT23 5AP**

Date of assessment: 20 March 2015  
 Date of certificate: 20 March 2015  
 Reference number: 0469-3990-0573-9525-1441  
 Type of assessment: SAP, new dwelling  
 Accreditation scheme: Elmhurst Energy Systems Ltd  
 Assessor's name: Mr. Paul Skelly  
 Assessor's accreditation number: EES/008420  
 Employer/Trading name: PS Design  
 Employer/Trading address: 49 Hillsborough Road, Antrim, Carryduff, BT8 8HS  
 Related party disclosure: No related party

## Energy Efficiency Rating

	Current	Potential
Very energy efficient - lower running costs		
<b>A</b> 92 plus		
<b>B</b> 81-91	85	85
<b>C</b> 69-80		
<b>D</b> 55-68		
<b>E</b> 39-54		
<b>F</b> 21-38		
<b>G</b> 1-20		
Not energy efficient - higher running costs		

## Technical Information

**Main heating type and fuel:** Boiler and radiators, mains gas  
**Total floor area:** 68 m<sup>2</sup>  
**Approximate energy use:** 65 kWh/m<sup>2</sup> per year  
**Approximate CO<sub>2</sub> emissions:** 12 kg/m<sup>2</sup> per year  
**Dwelling type:** Mid-floor flat

## Benchmarks

Typical new build **B86**  
 Average for Northern Ireland **D60**

The approximate energy use and CO<sub>2</sub> emissions are per square metre of floor area based on fuel costs for the heating, ventilation, hot water and lighting systems. The rating can be compared to two benchmarks: one that would be attained by a typical new dwelling with oil heating constructed to the minimum standards of the building regulations current at the date of the assessment and the second is the average for the housing stock in Northern Ireland.

### Estimated energy use, carbon dioxide (CO<sub>2</sub>) emissions and fuel costs of this home

	Current	Potential
Energy use	65 kWh/m <sup>2</sup> per year	65 kWh/m <sup>2</sup> per year
Carbon dioxide emissions	.8 tonnes per year	.8 tonnes per year
Lighting	£50 per year	£50 per year
Heating	£169 per year	£169 per year
Hot water	£84 per year	£84 per year

The figures in the table above have been provided to enable prospective buyers and tenants to compare the fuel costs and carbon emissions of one home with another. To enable this comparison the figures have been calculated using standardised running conditions (heating periods, room temperatures, etc.) that are the same for all homes, consequently they are unlikely to match an occupier's actual fuel bills and carbon emissions in practice. The figures do not include the impacts of the fuels used for cooking or running appliances, such as TV, fridge etc.; nor do they reflect the costs associated with service, maintenance or safety inspections. Always check the certificate date because fuel prices can change over time and energy saving recommendations will evolve.

To see how this home can achieve its potential rating please see the recommended measures.

### About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by Elmhurst Energy Systems Ltd, to a scheme authorised by the Government. This certificate was produced using the SAP 2009 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections) Regulations (Northern Ireland) 2008. A copy of the certificate has been lodged on a national register.

### If you have a complaint or wish to confirm that the certificate is genuine

Details of the assessor and the relevant accreditation scheme are on the preceding page. You can get contact details of the accreditation scheme from their website at [www.elmhurstenergy.co.uk](http://www.elmhurstenergy.co.uk) together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

### About the building's performance ratings

The ratings provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in Northern Ireland is band D (rating 60).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at [www.epb.dfpni.gov.uk](http://www.epb.dfpni.gov.uk)

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

Remember to look for the energy saving recommended logo when buying energy-efficient products. It's a quick and easy way to identify the most energy-efficient products on the market.

For advice on how to take action and to find out about offers available to help make your home more energy efficient, call **0800 512 012** or visit **[www.energysavingtrust.org.uk](http://www.energysavingtrust.org.uk)**

## About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

## Environmental Impact (CO<sub>2</sub>) Rating

	Current	Potential
<b>Very environmentally friendly - lower CO<sub>2</sub> emissions</b>		
<b>A</b> 92 plus		
<b>B</b> 81-91	90	90
<b>C</b> 69-80		
<b>D</b> 55-68		
<b>E</b> 39-54		
<b>F</b> 21-38		
<b>G</b> 1-20		
<b>Not environmentally friendly - higher CO<sub>2</sub> emissions</b>

## Recommended measures to improve this home's energy performance

Apartment 4  
16a Killinchy Street  
Comber  
NEWTOWNARDS  
BT23 5AP

Date of certificate: 20 March 2015  
Reference number: 0469-3990-0573-9525-1441

### Summary of this home's energy performance related features

The following is an assessment of the key individual elements that have an impact on this home's performance rating. Each element is assessed by the national calculation methodology; 1 star means least efficient and 5 stars means most efficient.

Element	Description	Current performance	
		Energy Efficiency	Environmental
Walls	Average thermal transmittance 0.18 W/m <sup>2</sup> K	★★★★★	★★★★★
Roof	(other premises above)	—	—
Floor	(other premises below)	—	—
Windows	High performance glazing	★★★★★	★★★★★
Main heating	Boiler and radiators, mains gas	★★★★☆	★★★★☆
Main heating controls	Time and temperature zone control	★★★★★	★★★★★
Secondary heating	None	—	—
Hot water	From main system	★★★★☆	★★★★☆
Lighting	Low energy lighting in all fixed outlets	★★★★★	★★★★★
Air tightness	Air permeability 3.3 m <sup>3</sup> /h.m <sup>2</sup> (as tested)	★★★★☆	★★★★☆

Current energy efficiency rating B 85

Current environmental impact (CO<sub>2</sub>) rating B 90

Thermal transmittance is a measure of the rate of heat loss through a building element; the lower the value the better the energy performance.

Air permeability is a measure of the air tightness of a building; the lower the value the better the air tightness.

### Low and zero carbon energy sources

None

## Recommendations

None

## Further measures to achieve even higher standards

None

## What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO<sub>2</sub> emissions. The papers you are given by the builder and the warranty provider will help you in this.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme. Minimise the use of tumble dryers and dry clothes outdoors where possible.
