

# Energy performance certificate (EPC)

|  |                           |   |
|--|---------------------------|---|
| 40 Sherwood Avenue<br>NEWTOWNABBEY<br>BT36 5GF | Energy rating<br><b>E</b> | Valid until:<br>26 March 2034                   |
|  |                           | Certificate number:<br>9734-7427-3300-0553-6222 |

|                  |                   |
|------------------|-------------------|
| Property type    | Detached house    |
| Total floor area | 118 square metres |

## Energy rating and score

This property's energy rating is E. It has the potential to be D.

[See how to improve this property's energy efficiency.](#)

| Score | Energy rating | Current     | Potential   |
|-------|---------------|-------------|-------------|
| 92+   | <b>A</b>      |             |             |
| 81-91 | <b>B</b>      |             |             |
| 69-80 | <b>C</b>      |             |             |
| 55-68 | <b>D</b>      |             | 65 <b>D</b> |
| 39-54 | <b>E</b>      | 40 <b>E</b> |             |
| 21-38 | <b>F</b>      |             |             |
| 1-20  | <b>G</b>      |             |             |

The graph shows this property's current and potential energy rating.

Properties get a rating from **A (best) to G (worst)** and a **score**. The better the rating and score, the lower your energy bills are likely to be.

For properties in Northern Ireland:

- the average energy rating is D
- the average energy score is 60

## Breakdown of property's energy performance

### Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property's age and type. They are used for features the assessor could not inspect.

| Feature              | Description                                     | Rating    |
|----------------------|---|-----------|
| Wall                 | Cavity wall, as built, insulated (assumed)      | Good      |
| Roof                 | Pitched, 150 mm loft insulation                 | Good      |
| Roof                 | Pitched, insulated (assumed)                    | Good      |
| Window               | Fully double glazed                             | Average   |
| Main heating         | Boiler and radiators, oil                       | Poor      |
| Main heating control | Programmer, no room thermostat                  | Very poor |
| Hot water            | From main system, no cylinder thermostat        | Very poor |
| Lighting             | Low energy lighting in 21% of fixed outlets     | Poor      |
| Floor                | Suspended, limited insulation (assumed)         | N/A       |
| Floor                | To unheated space, limited insulation (assumed) | N/A       |
| Secondary heating    | Room heaters, dual fuel (mineral and wood)      | N/A       |

## Primary energy use

The primary energy use for this property per year is 346 kilowatt hours per square metre (kWh/m2).

► [About primary energy use](#)

## How this affects your energy bills

An average household would need to spend **£2,814 per year on heating, hot water and lighting** in this property. These costs usually make up the majority of your energy bills.

You could **save £1,093 per year** if you complete the suggested steps for improving this property's energy rating.

This is **based on average costs in 2024** when this EPC was created. People living at the property may use different amounts of energy for heating, hot water and lighting.

## Impact on the environment

This property's environmental impact rating is F. It has the potential to be D.

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO2) they produce each year.

### Carbon emissions

|                                      |                    |
|--------------------------------------|--------------------|
| An average household produces        | 6 tonnes of CO2    |
| This property produces               | 10.0 tonnes of CO2 |
| This property's potential production | 6.2 tonnes of CO2  |

You could improve this property's CO2 emissions by making the suggested changes. This will help to protect the environment.

These ratings are based on assumptions about average occupancy and energy use. People living at the property may use different amounts of energy.

# Changes you could make

► [Do I need to follow these steps in order?](#)

## Step 1: Increase loft insulation to 270 mm

|  |             |
|--|-------------|
| Typical installation cost                | £100 - £350 |
| Typical yearly saving                    | £48         |
| Potential rating after completing step 1 | 41 E        |

## Step 2: Low energy lighting

|   |      |
|---|------|
| Typical installation cost                       | £55  |
| Typical yearly saving                           | £94  |
| Potential rating after completing steps 1 and 2 | 42 E |

## Step 3: Heating controls (room thermostat and TRVs)

|  |             |
|--|-------------|
| Typical installation cost                      | £350 - £450 |
| Typical yearly saving                          | £279        |
| Potential rating after completing steps 1 to 3 | 48 E        |

## Step 4: Floor insulation (suspended floor)

|  |               |
|--|---------------|
| Typical installation cost                      | £800 - £1,200 |
| Typical yearly saving                          | £103          |
| Potential rating after completing steps 1 to 4 | 50 E          |

## Step 5: Heat recovery system for mixer showers

|  |             |
|--|-------------|
| Typical installation cost                      | £585 - £725 |
| Typical yearly saving                          | £41         |
| Potential rating after completing steps 1 to 5 | 52 E        |

## Step 6: Replace boiler with new condensing boiler

|                           |                 |
|---------------------------|-----------------|
| Typical installation cost | £2,200 - £3,000 |
| Typical yearly saving     | £528            |

**Potential rating after completing steps 1 to 6****65 D****Step 7: Solar water heating****Typical installation cost** £4,000 - £6,000**Typical yearly saving** £53**Potential rating after completing steps 1 to 7****67 D****Step 8: Solar photovoltaic panels, 2.5 kWp****Typical installation cost** £3,500 - £5,500**Typical yearly saving** £536**Potential rating after completing steps 1 to 8****75 C****Help paying for energy improvements**

You might be able to get a grant from the [Boiler Upgrade Scheme \(https://www.gov.uk/apply-boiler-upgrade-scheme\)](https://www.gov.uk/apply-boiler-upgrade-scheme). This will help you buy a more efficient, low carbon heating system for this property.

**Who to contact about this certificate****Contacting the assessor**

If you're unhappy about your property's energy assessment or certificate, you can complain to the assessor who created it.

|                        |  |
|------------------------|--|
| <b>Assessor's name</b> | Richard Gallagher  |
| <b>Telephone</b>       | 07530 113548   |
| <b>Email</b>           | <a href="mailto:rickygallagher@gmail.com">rickygallagher@gmail.com</a> |

**Contacting the accreditation scheme**

If you're still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

|                             |  |
|-----------------------------|--|
