

# Energy performance certificate (EPC)

---

## Certificate contents

[Energy performance rating for this property](#)

[Breakdown of property's energy performance](#)

[Environmental impact of this property](#)

[How to improve this property's energy performance](#)

[Estimated energy use and potential savings](#)

[Contacting the assessor and accreditation scheme](#)

---

Energy rating

D

14 SPRINGVALE PARADE  
BELFAST  
BT14 8DB

Valid until 26 January 2031

Certificate number **7339-1329-2000-0685-3222**

[Print this certificate](#)

Property type

Semi-detached house

Total floor area

104 square metres

## Energy efficiency rating for this property

This property's current energy rating is D. It has the potential to be D.

[See how to improve this property's energy performance.](#)

A B C D E F G 92+ 81-91 69-80 55-68 39-54 21-38 1-20 Score Energy rating Current  
Potential 64 | D  
68 | D

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

The average energy rating and score for a property in Northern Ireland are D (60).

## Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says 'assumed', it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Cavity wall, as built, no insulation (assumed)	Poor
Roof	Pitched, limited insulation (assumed)	Very poor
Window	Fully double glazed	Average
Main heating	Boiler and radiators, mains gas	Good
Main heating control	Programmer, room thermostat and TRVs	Good
Hot water	From main system	Good
Lighting	Low energy lighting in 73% of fixed outlets	Very good
Floor	Solid, no insulation (assumed)	N/A
Secondary heating	None	N/A

## Primary energy use

The primary energy use for this property per year is 276 kilowatt hours per square metre (kWh/m<sup>2</sup>).

What is primary energy use?

## Environmental impact of this property

One of the biggest contributors to climate change is carbon dioxide (CO<sub>2</sub>). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO<sub>2</sub> emissions.

An average household produces

6 tonnes of CO<sub>2</sub>

This property produces

5.1 tonnes of CO<sub>2</sub>

This property's potential production

4.4 tonnes of CO<sub>2</sub>

By making the [recommended changes](#), you could reduce this property's CO<sub>2</sub> emissions by 0.7 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

## How to improve this property's energy performance

Potential energy rating

D

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from D (64) to D (68).

What is an energy rating?

---

### Recommendation 1: Cavity wall insulation

Cavity wall insulation

Typical installation cost

£500 - £1,500

Typical yearly saving

£119

Potential rating after carrying out recommendation 1

band-d  
68 | D

### Recommendation 2: Low energy lighting

Low energy lighting

Typical installation cost

£20

Typical yearly saving	£19
Potential rating after carrying out recommendations 1 and 2	band-d 68   D

### **Recommendation 3: Floor insulation (solid floor)**

Floor insulation (solid floor)	
Typical installation cost	£4,000 - £6,000
Typical yearly saving	£39
Potential rating after carrying out recommendations 1 to 3	band-c 70   C

### **Recommendation 4: Solar water heating**

Solar water heating	
Typical installation cost	£4,000 - £6,000
Typical yearly saving	£30
Potential rating after carrying out recommendations 1 to 4	band-c 71   C

### **Recommendation 5: Solar photovoltaic panels, 2.5 kWp**

Solar photovoltaic panels	
Typical installation cost	£3,500 - £5,500
Typical yearly saving	£323
Potential rating after carrying out recommendations 1 to 5	band-c 80   C

### **Paying for energy improvements**

[Find energy grants and ways to save energy in your home.](#)

## **Estimated energy use and potential savings**

Estimated yearly energy cost for this property

£1067  
Potential saving  
£138

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The estimated saving is based on making all of the recommendations in [how to improve this property's energy performance](#).

### **Heating use in this property**

Heating a property usually makes up the majority of energy costs.

### **Potential energy savings by installing insulation**

The assessor did not find any opportunities to save energy by installing insulation in this property.

## **Contacting the assessor and accreditation scheme**

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.

### **Assessor contact details**
